

Burn Referral System

- HIPAA Compliant
- Better Patient Management
- Customizable Workflow
- Works with any digital image
- 2 Way Communication
- Fully Traceable
- Push Delivery

The mVisum Burn Referral System provides a simple and rapid means to review and respond to patient burn images.

With the system, hospitals and other facilities can securely send patient images to burn centers for evaluation and referral purposes.

Information is transmitted via secure HIPAA compliant internet servers through the cell phone network to the required physician's handheld smartphone.

Communication through the mVisum platform is bi-directional with automated workflow support.

Device Compatibility

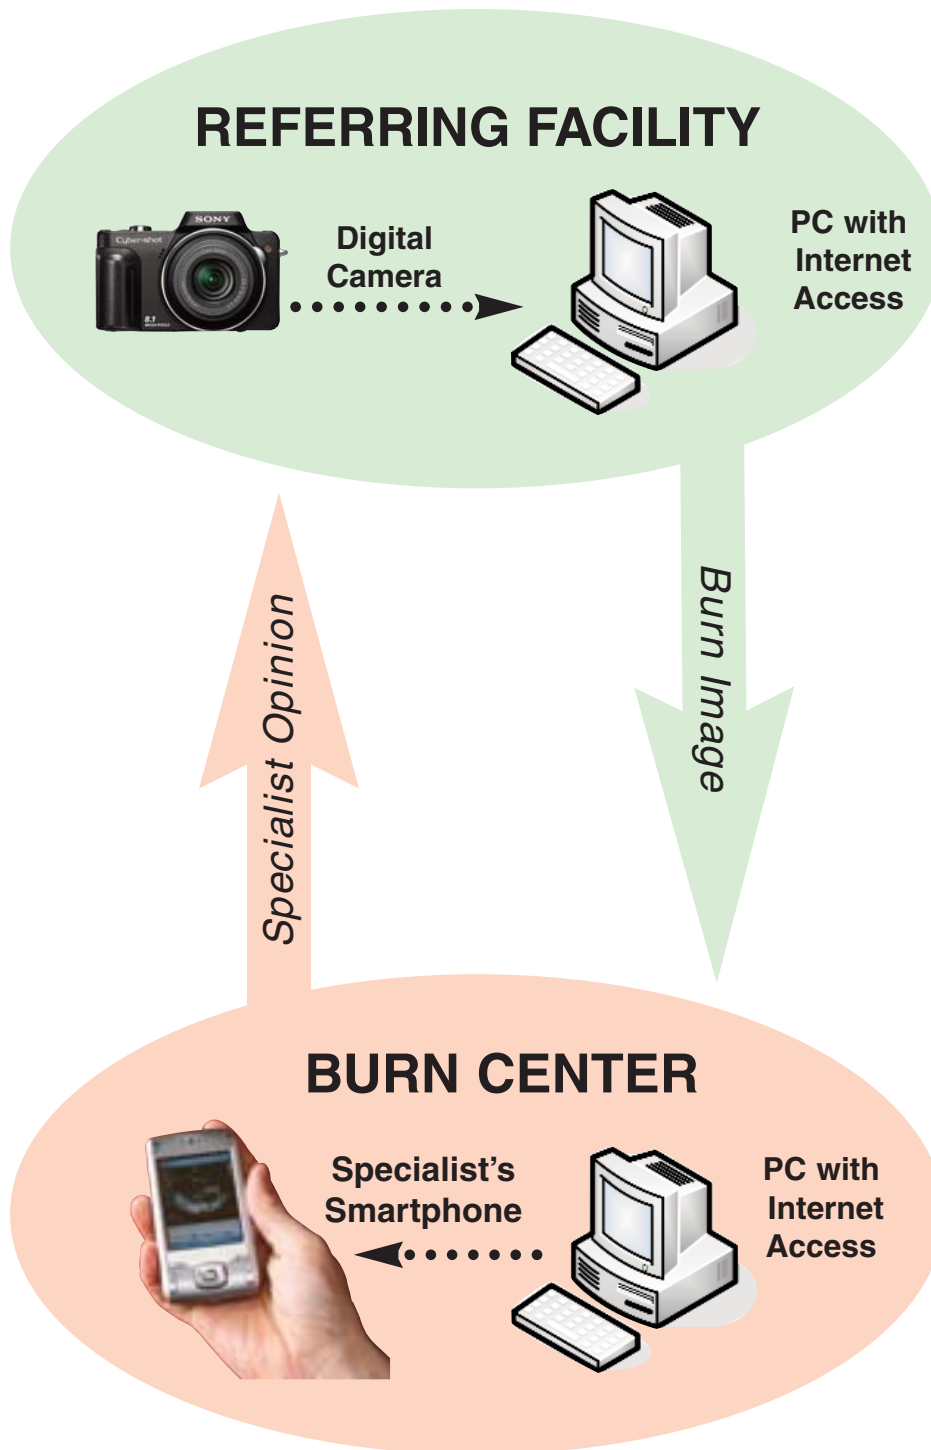

The mVisum Medical Communication System is compatible with the following smartphone types*:

- Windows Mobile 5.0 / 6.0
- Blackberry (8300 series and later)
- iPhone (v2.2.1 or later)

**Please refer to our Hardware Requirements document found on our website for complete specifications.*
