

The **mVisum** Medical Communication System can be configured as a referral management system. By providing access to the **mVisum** web based interface to outlying hospitals, medical centers, clinics, physician offices, etc., your facility can receive and route referral requests in an organized, rapid and traceable manner. Patient data is transmitted securely through HIPAA compliant servers to appropriate specialists who can analyze and provide expert opinion directly from their handheld smartphones containing the mVisum application.

Referral Management System

The **mVisum** Referral Management System transmits patient data via a secure HIPAA compliant web based interface.
